Instruction

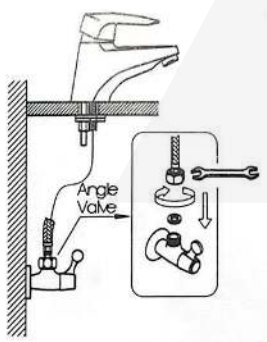

Step -1

Before installation, ensure there's one hole (Ø32-Ø40mm) in the basin. Put the O-ring washer under the bottom of the faucet body.

Step -2

Install the faucet body with inlet hoses and screw bolts into the basin hole, make the fixation parts connect with the screw bolts, screw down the nuts.

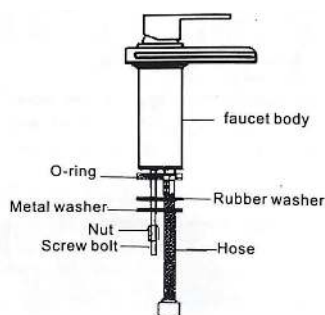

Step -3

Connect the two hoses with cold and hot water angle valve separately.

Step -4

Turn on the water supply, check all connect points if leakage. If leaking, tighten it.

Now the faucet is ready for using.

The installation steps are applied to one hole bathroom faucet with two screw bolt, for example

To the LED faucet with batter batteries box, the above installation steps is are applied, Besider, it needs to fill four batteries to the batteries box and fix the batteries box to the wall with the two screws inside the parts bag.
