### Drawing

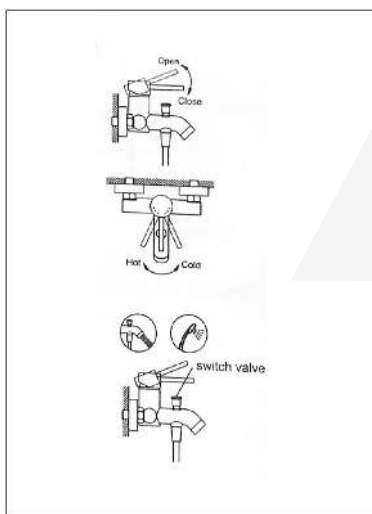

\*All dimensions are in mm

Fix the shower seat to a suitable position according to the user's height and favorite. Then mount the shower hose to the mixer and hand shower.

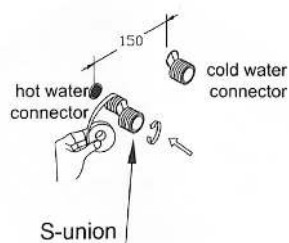

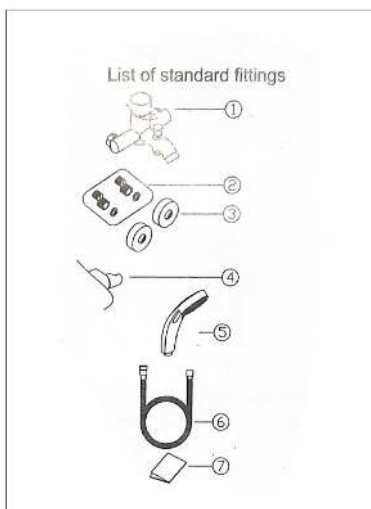

The above installation instruction is also applicable to the shower mixer's installation.

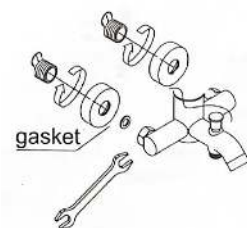

## USAGE INSTRUCTION

- i. Open water valve to check if there is any leakage.
- ii. When turning the handle upward, the valve is open. and the turning angle can control water outflow. According to the signals of H,C on the handle, the user can turn it to the left or right to regulate the water temperature.
- iii. Normally water will go out from the spout firstly by default. And the user can switch it to the hand shower by pulling the switch valve (as right illustration). This switch can reset automatically after closing water.

## INSTALLATION STEPS

- i. Screw the decoration cover onto the S-union. Then install the mixer's body to the S-union via the two connecting nuts, and fix them by spanner. (Note: in order to avoid scratching on the product surface wrapping some tapes on the spanner is suggested).

- ii. After wrapping the tape, connect the S-union to the water outlet connector. (The distance between the hot water outlet and cold water outlet connector is 150mm, The height apart from floor should be fixed according to the bathtub height).
